

defi4refi — one-pager

Free protocol engineering for regenerative-finance projects — funded by public donations, delivered as open source.

The idea

Regenerative-finance (ReFi) projects have world-class vision and no engineering budget. **defi4refi** is a public-goods development studio: supporters fund the studio, and the studio designs and ships DeFi protocol codebases **free** to selected ReFi teams — staking systems, community treasuries, bonding markets, governance.

Donations go into a Colorado LLC. Donors get nothing back except a collectible Artifact (NFT) — so it's patronage of a public good, not a service sale. Delivered code is open source; client teams deploy and operate their own contracts. We ship **audit-ready, not audited**.

What we deliver

Service	What it is
Design sprint	Tokenomics + architecture doc, threat model, launch roadmap
Protocol-in-a-box	Token, staking, bonds, treasury, governance — adapted from contracts already live in production on Base
dApp frontend	Staking/bonds/dashboard UI with wallet stack
Advisory	Architecture + audit-prep reviews

Agent-assisted delivery with human review on every money path: ~10–20 review-hours per build vs. a \$50–150k agency quote. Target: **\$6–10k of funding per delivered codebase**, 2–3 engagements at a time.

How it's funded

- **Artizen** (primary): \$10 Artifact sales + sponsor match funds (1–4x) + cash prizes. Next season starts ~mid-September; dev/tooling projects have raised \$50k–\$280k there.
- Plus: Giveth, Octant, Gitcoin campaigns, direct crypto, and hypercerts per delivery for retroactive funding.
- Realistic first season: **\$18–50k conservative**, \$70k+ if a drive podium lands.

The plan

1. **Now**: submit the Artizen project, file the LLC, set up the treasury Safe.
2. **Weeks 1–3**: launch site + application intake, submit to every qualifying fund.
3. **Weeks 2–10**: first free pilot engagement (already scoped: a community token for a regenerative-economy platform), published as a public case study.
4. **Ongoing**: 2–3 concurrent engagements, quarterly public reports of funds in → work shipped.

What I'd love your take on

- Is the model clear and compelling — would you back it or apply? What am I missing? Who should I show this to next?
